

City Ranger 2250 Grass Collector

Our grass collector is an effective combination of two units: a rotary mower to collect the grass and a hopper to store it. The rotary mower connects directly to a central collection hose, which itself is connected to the hopper. The hose is located under the machine to avoid increasing the overall width of the mower, while retaining the rotary mower's excellent manoeuvrability (refer to the rotary mower data sheet for further details).

The hopper is manufactured from moulded plastic, which is designed to withstand corrosive grass residue. It is compact yet has a large capacity of 750 l, which means less emptying. Also, the grass is cut twice in transit from mower to hopper, which means that it takes up very little space. When the hopper does need emptying, it's all done via a joystick from the comfort of the cab seat, so the operator doesn't even need to get off.

Save time and savour the results!

The time saved mowing grass and collecting it in one pass is clear. Also, the Nilfisk Outdoor grass collector can tackle long grass, which means less cutting throughout the year. The grass collector cleans up after itself, leaving an attractive, clipping-free area. - and without any leaves if a leaf collection hose (extra equipment) is fitted.

When you change attachments, the City Ranger 2250 hydraulic hoses are connected at the turn of a handle!

Technical data

Grass Collector

Key features

Effective and direct airflow in the hose minimises the risk of blockage between the closely-positioned mower and hopper

The rotary mower's ability to mow all types of grass, whether long, wet or thick, makes it a flexible and adaptable partner

The cutting width is 1,210 mm – the same as the rotary mower without the hopper

The hopper has a capacity of 750 l

Easy emptying without the need to leave your seat. Joystick-controlled hydraulic tip function with automatic hinged rear cover

Variably adjustable from 575 to 1,860 mm means the hopper can be emptied directly into any container within this height range

The hopper is easy to clean

The supplied frame allows for simple and rapid attaching and removal of the hopper

Extra equipment

Leaf collection hose: It is also possible to remove leaves with the grass collector. When a leaf collection hose is fitted on the hopper, you can remove leaves in places where the mower cannot work – up to 6 m. The lightweight leaf collection hose is discretely fitted on the top of the hopper, when not in use.

Grass filter (10 mm): The hopper is supplied with a 5 mm grass filter as standard, to minimise airborne deposits when working with dry grass. A 10 mm grass filter increases airflow and suction power, and is an advantage when working with damp and heavy grass

Plastic panel: Used for very damp and sticky grass. The plastic panel is inserted into the hopper to prevent the grass filter from becoming blocked

Mulch mower and rotary mower kits:

You can quickly convert the grass collector to a non-collecting mulch mower or standard rotary mower with the help of special kits available at all authorised Nilfisk Outdoor dealers

Dimensions

Attached:

Length	3,230 mm
Width	1,285 mm
Height without leaf collection hose	1,960 mm
Height with leaf collection hose	2,150 mm

Storage dimensions:

Length	1,700 mm
Width	940 mm
Height without leaf collection hose	1,950 mm
Height with leaf collection hose	2,150 mm

Technical data:

Weight	202 kg
Hopper frame weight	31 kg
Hopper volume	750 liter
Max. hopper load	500 kg
Tipping level from ground, without high tipping:	575 mm
Tipping level from ground, with high tipping:	Variably adjustable from 575 to 1,860 mm
Airflow	2,400 m ³ /h
Air speed	120 km/h
Recommended operating speed	10-12 km/h
Sound power level, re Directive 2000/14/EU	105 LWA

CE certified according to EU Directive
