

City Ranger 2250 Lawn Edger

The hydraulic lawn edger effectively maintains lawn edges, whatever their shape or form. Corners and bends are cut perfectly. The grass edge is first cut and then cultivated – two jobs done at once. You can choose if you want to drive on the lawn or on the path as you work, because the lawn edger cutter can turn – depending, of course, on the space available. Lawn edger is equipped with a sealed guard, so flowers and bedding plants are free from harm.

It can also be used as a mini-cultivator

The lawn edger is designed with variable-adjustable offset, so it can operate as a cultivator if it is driven repeatedly over the same soil. The cutting depth depends on the ground conditions and is regulated by adjusting the support wheel.

The lawn edger is supplied with a frame that makes fitting an attachment easy. Fitting and attaching done without the use of tools.

When you change attachments, the City Ranger 2250 hydraulic hoses are connected at the turn of a handle!

Technical data

Lawn Edger

2,640 mm

1,220-1,370 mm

Technical information

The lawnedger uses a rotary cutter with two blades

The working depth is regulated according to ground conditions, by adjusting the support wheel

Dimensions

Attached:

Length	2,640 mm
Width	1,220-1,370 mm
Height	1,960 mm

Storage dimensions:

Length	540 mm
Width	930-1,080 mm
Height	520 mm

Technical data:

Weight	50 kg
Clearance height under cutter	140 mm
Max. cutting depth	95 mm
Offset	150 mm
