

City Ranger 2250 Load carrier

Fitting the load carrier to the back of the utility machine gives you the extra space you need to carry hand tools around with you, and saves you having to make several trips to get them. The load carrier is compact and convenient, but spacious enough to hold a hand mower, grass trimmer, lopping shears, and a bag of compost.

The compact load carrier is made from moulded plastic, and has a lightweight but very solid construction. The carrier can withstand wind, weather and sharp objects, and has been designed for maximum ease-of-use. The carrier can be fitted and removed quickly and easily, using a single handle. Hand tools can be strapped down during transport to prevent sliding (there are lashing hooks on both sides). The back flap folds down to provide easy access to the carrier, and provides an ergonomically correct loading height.

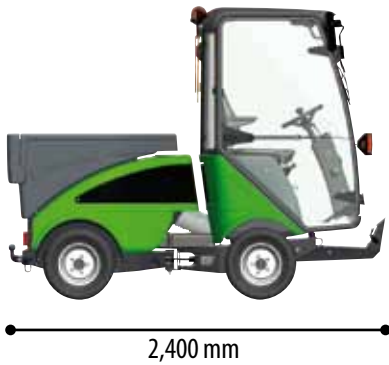

When you change attachments, the City Ranger 2250 hydraulic hoses are connected at the turn of a handle!

Technical Data

Load carrier

Special features

- Ergonomic loading height
- Lashing hooks to strap down tools
- Lightweight design
- Solid construction
- Easy attachment and detachment
- Easy to clean and store

Dimensions

Attached:

Length	2,400 mm
